**Subject:** RE: Split Samples

Hi Rob,

With the exception of the first sediment samples from the 2010 benthic program, AXYS performed all the listed analyses for the remaining sampling programs. Cape Fear Laboratory provided the analysis of the first round of sediment samples. We changed to AXYS for D/Fs, PCBs and pesticides and additionally alkylated PAHs to match the split lab that was used historically and to limit needed sample volumes.

As for the status of our split samples, all results have been received from the laboratory. Some validation is still ongoing for the CWCM high volume samples and the last high flow event. I will be sending you the split sample report from the background sediment sampling this week (possibly today).

Thanks,

Stephanie

Has Axys done all the splits for D/Fs, PCBs and pesticides for all sampling programs?

Thanks

Rob
